Service by excellence

**KE FISCHER** - The cutting edge of  
tire machinery

**The market evolution requires new and faster technological developments.**

Running KE FISCHER cutting lines at high level accuracy demands, a proper and expert maintenance.

Preventive and predicted maintenance schedules are the key factors in proper machine functionality. Machine life span depends greatly on the quality of the regular and repetitive service work.

**FISCHERKING Service offers highly skilled expertise about the KE FISCHER machine status and its functions and helps to minimize and solve problems when needed most.**

### **KE FISCHER CARBIDE BLADES:**

The market evolution requires new and faster technological developments.

Especially in the tire industry for the cutting process, focusing on the electrified mobility challenges.

By using carbide blades in KE FISCHER lines for cutting of steel and textile cord, aims of increase in product quality with a higher economical efficiency at the same time. The type of metal carbide used for KE FISCHER blades has a fine structure which improves considerably the mechanical quality of the cutting edge as well as the cutting results and the economical efficiency compared with cutting blades made of hardened steel.

The regrinding is taking place at FISCHERKING to the highest standards of KE FISCHER.

### **OUTSTANDING ADVANTAGES FOR KE FISCHER CARBIDE BLADES:**

- Increase of service life with carbide steel blades, due to the higher hardness of the cutting edges.
- Less blades changes, resulting in a reduction of downtime of the line.
- Longer service life of cutting edge due to the less abrasive grit when regrinding KE FISCHER carbide blades.
- The high wearing quality of carbide edge ensures high and above all, permanently constant cutting quality.
- Accurate cuts through the special cutting edge shape and sharpening of KE FISCHER carbide blades.

- Very good cutting accuracy by means of high precision when manufacturing carbide blades.
- Saving costs in logistics and regrinding at FISCHERKING.

KE FISCHER carbide blades designed for the highest technological demands in electric car tires.
